What is Azo-Standard?

Azo-Standard is a pain reliever that affects the lower part of your urinary tract (bladder and urethra).

Azo-Standard is used to treat urinary symptoms such as pain or burning, increased urination, and increased urge to urinate. These symptoms can be caused by [infection](#), injury, [surgery](#), catheter, or other conditions that irritate the bladder.

Azo-Standard will treat urinary symptoms, but **this medication will not treat a urinary tract infection..** Take any [antibiotic](#) that your doctor prescribes to treat an infection.

Azo-Standard may also be used for purposes not listed in this medication guide.

Azo-Standard side effects

Get emergency medical help if you have any of these **signs of an allergic reaction**: hives; difficult breathing; swelling of your face, lips, tongue, or throat.

Azo-Standard may cause serious side effects. Stop using Azo-Standard and call your doctor at once if you have:

- little or no urinating;
- swelling, rapid weight gain;
- confusion, loss of appetite, pain in your side or lower back;
- [fever](#), pale or yellowed skin, stomach pain, [nausea](#) and [vomiting](#); or
- blue or purple appearance of your skin.

Common side effects of Azo-Standard may include:

- [headache](#);

- dizziness; or
- [upset stomach](#).

This is not a complete list of side effects and others may occur. Call your doctor for medical advice about side effects. You may report side effects to FDA at 1-800-FDA-1088.

Warnings

You should not use Azo-Standard if you have kidney disease.

Before taking this medicine

You should not use Azo-Standard if you are allergic to it, or if you have kidney disease.

To make sure Azo-Standard is safe for you, tell your doctor if you have:

- [liver disease](#);
- [diabetes](#); or
- a genetic enzyme deficiency called [glucose-6-phosphate dehydrogenase \(G6PD\)](#) deficiency.

FDA [pregnancy category](#) B. Azo-Standard is not expected to harm an unborn baby. **Do not use Azo-Standard without a doctor's advice if you are pregnant.**

It is not known whether [phenazopyridine](#) passes into breast milk or if it could harm a nursing baby. **Do not use this medicine without a doctor's advice if you are breast-feeding a baby.**

How should I take Azo-Standard?

Use exactly as directed on the label, or as prescribed by your doctor. Do not use in larger or smaller amounts or for longer than recommended.

Take Azo-Standard after meals.

Drink plenty of liquids while you are taking Azo-Standard.

Azo-Standard will most likely darken the color of your urine to an orange or red color. This is a normal effect and is not harmful. Darkened urine may also cause stains to your underwear that may be permanent.

Azo-Standard can also permanently stain soft contact lenses, and you should not wear them while taking this medicine.

Do not use Azo-Standard for longer than 2 days unless your doctor has told you to.

This medication can cause unusual results with urine tests. Tell any doctor who treats you that you are using Azo-Standard.

Store at room temperature away from moisture and heat.

 [Detailed Azo-Standard dosage information](#)

What happens if I miss a dose?

Take the missed dose as soon as you remember. Skip the missed dose if it is almost time for your next scheduled dose.

Do not take extra medicine to make up the missed dose.

What happens if I overdose?

Seek emergency medical attention or call the Poison Help line at 1-800-222-1222.

What should I avoid while taking Azo-Standard?

Do not use this medication while wearing soft contact lenses. Azo-Standard can permanently discolor soft contact lenses.

What other drugs will affect Azo-Standard?

Other drugs may interact with phenazopyridine, including prescription and over-the-counter medicines, [vitamins](#), and [herbal products](#). Tell each of your health care providers about all medicines you use now and any medicine you start or stop using.
