TussiCaps

Generic name: [chlorpheniramine and hydrocodone](#) [*KLOR-fen-IR-a-meen-and-HYE-droe-KOE-done*]**Drug class:** [Upper respiratory combinations](#)[Medically reviewed](#) by Drugs.com on Jul 31, 2023. Written by [Cerner Multum](#).[Uses](#) [Side effects](#) [Warnings](#) [Before taking](#) [Dosage](#) [Interactions](#)

What is TussiCaps?

[Chlorpheniramine](#) is an antihistamine that reduces the effects of natural chemical histamine in the body. Histamine can produce symptoms of sneezing, itching, watery eyes, and runny nose.

[Hydrocodone](#) is a narcotic cough suppressant. It affects the signals in the brain that trigger cough reflex.

TussiCaps is a combination medicine used to treat runny nose, sneezing, itching, watery eyes, and cough caused by allergies, the common cold, or the flu.

TussiCaps may also be used for purposes not listed in this medication guide.

TussiCaps side effects

Get emergency medical help if you have **signs of an allergic reaction**: hives; difficult breathing; swelling of your face, lips, tongue, or throat.

Like other narcotic medications, hydrocodone can slow your breathing. Death may occur if breathing becomes too weak.

A person caring for you should seek emergency medical attention if you have slow breathing with long pauses, blue colored lips, or if you are hard to wake up.

TussiCaps may cause serious side effects. Stop using TussiCaps and call your doctor at once if you have:

- severe drowsiness;
- noisy breathing, sighing, shallow breathing;
- severe [constipation](#);
- a light-headed feeling, like you might pass out;
- a [slow heart rate](#) or weak pulse;
- confusion; or

- **adrenal gland problems**--nausea, vomiting, loss of appetite, dizziness, feeling weak or tired.

Side effects such as dry mouth, constipation, and confusion may be more likely in older adults.

Common side effects of TussiCaps may include:

- trouble breathing;
- drowsiness;
- confusion;
- nausea, vomiting; or
- little or no urination.

This is not a complete list of side effects and others may occur. Call your doctor for medical advice about side effects. You may report side effects to FDA at 1-800-FDA-1088.

Warnings

MISUSE OF THIS MEDICINE CAN CAUSE ADDICTION, OVERDOSE, OR DEATH. Keep the medication in a place where others cannot get to it.

Do not give this medicine to a child younger than 6 years old.

Fatal side effects can occur if you use this medicine with alcohol, or with other drugs that cause drowsiness or slow your breathing.

Before taking this medicine

You should not use TussiCaps if you are allergic to chlorpheniramine or hydrocodone.

Do not use TussiCaps if you have used an MAO inhibitor in the past 14 days. A dangerous [drug interaction](#) could occur. MAO inhibitors include [isocarboxazid](#), linezolid, [methylene blue](#) injection, phenelzine, rasagiline, selegiline, [tranylcypromine](#), and others.

Do not give this medicine to a child younger than 6 years old. TussiCaps is not approved for use by anyone younger than 18 years old.

Tell your doctor if you have ever had:

- asthma or other breathing problems;
- seizures, or a [head injury](#) or brain tumor;
- a blockage in your digestive tract (stomach or intestines);
- [enlarged prostate](#), urination problems;
- [low blood pressure](#);
- liver or kidney disease;
- [Addison's disease](#) (an adrenal gland disorder);
- problems with your thyroid, gallbladder, or pancreas; or
- alcoholism or [drug addiction](#).

If you use hydrocodone while you are pregnant, your baby could become dependent on the drug. This can cause life-threatening withdrawal symptoms in the baby after it is born. Babies born dependent on habit-forming medicine may need medical treatment for several weeks. Tell your doctor if you are pregnant or plan to become pregnant.

You should not breast-feed while using TussiCaps.

How should I take TussiCaps?

Follow all directions on your prescription label and read all medication guides. **Never use this medicine in larger**

amounts, or for longer than prescribed.

Never share this medicine with another person, especially someone with a history of drug abuse or addiction. MISUSE CAN CAUSE ADDICTION, OVERDOSE, OR DEATH. Keep the medicine in a place where others cannot get to it. Selling or giving away TussiCaps is against the law.

Shake the **oral suspension** (liquid) before you measure a dose. Use the dosing syringe provided, or use a medicine dose-measuring device (not a kitchen spoon).

Do not mix the **oral suspension** with any other liquids or medicines.

Do not crush, chew, break, or open an **extended-release capsule**. Swallow it whole.

Call your doctor if your symptoms do not improve after 5 days of treatment, or if you have a fever with a headache or skin rash.

If you need surgery, tell the surgeon ahead of time that you are using TussiCaps.

Store at room temperature away from moisture and heat. Do not freeze.

Keep track of your medicine. TussiCaps is a drug of abuse and you should be aware if anyone is using your medicine improperly or without a prescription.

Do not stop using this medicine suddenly after long-term use, or you could have unpleasant withdrawal symptoms. Ask your doctor how to safely stop using the medicine.

 [Detailed TussiCaps dosage information](#)

What happens if I miss a dose?

Take the medicine as soon as you can, but skip the missed dose if it is almost time for your next dose. **Do not** take two doses at one time.

What happens if I overdose?

Seek emergency medical attention or call the Poison Help line at 1-800-222-1222. **A hydrocodone overdose can be fatal, especially in a child or other person using the medicine without a prescription.** Overdose symptoms may include slow breathing and heart rate, severe drowsiness, muscle weakness, cold and clammy skin, pinpoint pupils, and fainting.

What should I avoid while taking TussiCaps?

Do not drink alcohol. Dangerous side effects or death could occur.

Avoid driving or operating machinery until you know how TussiCaps will affect you. Dizziness or severe drowsiness can cause falls or other accidents.

Ask a doctor or pharmacist before using other cough or cold medicines that may contain similar ingredients.

What other drugs will affect TussiCaps?

Sometimes it is not safe to use certain medications at the same time. Some drugs can affect your blood levels of other drugs you take, which may increase side effects or make the medications less effective.

Using this medicine with other drugs that slow your breathing can cause dangerous side effects or death. Ask your doctor before using opioid medication, a sleeping pill, a muscle relaxer, or medicine for anxiety or seizures.

Tell your doctor about all your other medicines, especially:

- an antibiotic or antifungal medicine;
- antiviral medicine to treat hepatitis or HIV;
- asthma medication;
- bladder or urinary medicines;
- blood pressure medication;
- a diuretic or "water pill";
- medicine to treat a [stomach ulcer](#), [motion sickness](#), or [irritable bowel syndrome](#);
- medicine to treat [Parkinson's disease](#); or
- seizure medicine.

This list is not complete and many other drugs may affect TussiCaps. This includes prescription and over-the-counter medicines, vitamins, and [herbal products](#). Not all possible [drug interactions](#) are listed here.
