2. Cipro

Cipro

Generic name: [ciprofloxacin](#) (oral) [*SIP-roe-FLOX-a-sin*]

Drug class: [Quinolones and fluoroquinolones](#)

Medically reviewed by [Sanjai Sinha, MD](#). Last updated on Jul 21, 2024.

[Uses](#) [Warnings](#) [Before taking](#) [Dosage](#) [Side effects](#) [Interactions](#) [FAQ](#)

What is Cipro?

Cipro is a fluoroquinolone (flor-o-KWIN-o-lone) [antibiotic](#) that fights bacteria in the body.

Cipro is used to treat different types of bacterial infections. Cipro is also used to treat people who have been exposed to [anthrax](#) or certain types of [plague](#).

Fluoroquinolone antibiotics can cause serious or disabling side effects that may not be reversible.

Cipro should be used only for infections that cannot be treated with a safer antibiotic.

Warnings

Cipro can cause serious side effects, including tendon problems, nerve damage, serious mood or behavior changes, or [low blood sugar](#).

Stop using this medicine and call your doctor at once if you have: [headache](#), hunger, irritability, numbness, tingling, burning pain, confusion, [agitation](#), paranoia, problems with memory or concentration, thoughts of suicide, or sudden pain or movement problems in any of your joints.

In rare cases, ciprofloxacin may cause damage to your aorta, which could lead to dangerous bleeding or death. Get emergency medical help if you have severe and constant pain in your chest, stomach, or back.

You may not be able to use Cipro if you have a muscle disorder. Tell your doctor if you have a history of myasthenia gravis.

Before taking this medicine

You should not use Cipro if you are allergic to ciprofloxacin, or if:

- you also take [tizanidine](#); or
- you are allergic to other fluoroquinolones ([levofloxacin](#), [moxifloxacin](#), norfloxacin, [ofloxacin](#)).

Ciprofloxacin may cause swelling or tearing of a tendon (the fiber that connects bones to muscles in the body), especially in the Achilles' tendon of the heel. This can happen during treatment or several months after you stop taking Cipro. Tendon problems may be more likely in children and older adults, or people who use steroid medicine or have had an organ transplant.

To make sure Cipro is safe for you, tell your doctor if you have ever had:

- arthritis or problems with your tendons, bones or joints (especially in children);
- diabetes, low blood sugar;
- nerve problems;
- an aneurysm or blood circulation problems;
- heart problems, or a [heart attack](#);
- muscle weakness, [myasthenia gravis](#);
- liver or kidney disease;
- a seizure, [head injury](#), or [brain tumor](#);
- trouble swallowing pills;
- [long QT syndrome](#) (in you or a family member); or
- low levels of potassium in your blood ([hypokalemia](#)).

Do not give Cipro to a child without medical advice.

It is not known whether this medicine will harm an unborn baby. Tell your doctor if you are pregnant.

You should not breastfeed while taking ciprofloxacin and for 2 days after your last dose. Ask your doctor about breastfeeding if you take ciprofloxacin for anthrax exposure.

 [Cipro pregnancy and breastfeeding warnings](#) (more detail)

How should I take Cipro?

Take Cipro exactly as prescribed by your doctor. Follow all directions on your prescription label and read all medication guides or instruction sheets.

Take Cipro at the same time each day, with or without food.

Shake the **Cipro oral suspension** (liquid) for 15 seconds before you measure a dose. Use the dosing syringe provided, or use a medicine dose-measuring device (not a kitchen spoon). **Do not give Cipro oral suspension through a feeding tube.**

Drink plenty of liquids while you are taking this medicine .

Use this medicine for the full prescribed length of time, even if your symptoms quickly improve. Skipping doses can increase your risk of infection that is resistant to medication. Ciprofloxacin will not treat a [viral infection](#) such as the flu or a [common cold](#).

Do not share Cipro with another person.

Store at room temperature away from moisture and heat. Do not allow the liquid medicine to freeze. Throw away any unused liquid after 14 days.

 [Detailed Cipro dosage information](#)

What happens if I miss a dose?

If you take regular tablets or oral suspension: Take the medicine as soon as you can, but skip the missed dose if your next dose is due in less than 6 hours.

Do not take two doses at one time.

What happens if I overdose?

Seek emergency medical attention or call the Poison Help line at 1-800-222-1222.

What to avoid

Do not take Cipro with dairy products such as milk or yogurt, or with calcium-fortified juice. You may eat or drink these products with your meals, but do not use them alone when taking Cipro.

Antibiotic medicines can cause [diarrhea](#), which may be a sign of a new infection. If you have diarrhea that is watery or bloody, call your doctor before using anti-diarrhea medicine.

Ciprofloxacin could make you sunburn more easily. Avoid sunlight or tanning beds. Wear protective clothing and use sunscreen (SPF 30 or higher) when you are outdoors. **Tell your doctor if you have severe burning, redness, itching, rash, or swelling after being in the sun.**

Avoid driving or hazardous activity until you know how this medicine will affect you. Your reactions could be impaired.

Ciprofloxacin side effects

Get emergency medical help if you have **signs of an allergic reaction to Cipro** ([hives](#), difficult breathing, swelling in your face or throat) **or a severe skin reaction** (fever, [sore throat](#), burning in your eyes, skin pain, red or purple [skin rash](#) that spreads and causes blistering and peeling).

Ciprofloxacin can cause serious side effects, including tendon problems, damage to your nerves (which may be permanent), serious mood or behavior changes (after just one dose), or low blood sugar (which can lead to coma).

Stop taking this medicine and call your doctor at once if you have:

- **low blood sugar** - headache, hunger, irritability, [dizziness](#), [nausea](#), [fast heart rate](#), or feeling shaky;
- **nerve damage symptoms** - numbness, tingling, burning pain in your hands, arms, legs, or feet;
- **serious mood or behavior changes** - nervousness, confusion, agitation, paranoia, hallucinations, memory problems, trouble concentrating, thoughts of suicide; or
- **signs of tendon rupture** - sudden pain, swelling, bruising, tenderness, stiffness, movement problems, or a snapping or popping sound in any of your joints (rest the joint until you receive medical care or instructions).

In rare cases, ciprofloxacin may cause damage to your aorta, the main blood artery of the body. This could lead to dangerous bleeding or death. Get emergency medical help if you have severe and constant pain in your chest, stomach, or back.

Also, stop using Cipro and call your doctor at once if you have:

- severe stomach pain, diarrhea that is watery or bloody;
- fast or pounding heartbeats, fluttering in your chest, shortness of breath, and sudden dizziness (like you might pass out);
- any skin rash, no matter how mild;
- muscle weakness, breathing problems;
- little or no urination;
- [jaundice](#) (yellowing of the skin or eyes); or
- **increased pressure inside the skull** - severe headaches, ringing in your ears, dizziness, nausea, vision problems, pain behind your eyes.

Common Cipro side effects may include:

- nausea, [vomiting](#), diarrhea, stomach pain;
- headache; or
- abnormal liver function tests.

This is not a complete list of side effects and others may occur. Call your doctor for medical advice about side effects. You may report side effects to FDA at 1-800-FDA-1088.

What other drugs will affect Cipro?

Some medicines can make Cipro much less effective when taken at the same time. **If you take any of the following medicines, take your dose 2 hours before or 6 hours after you take the other medicine.**

- the ulcer medicine [sucralfate](#), or [antacids](#) that contain calcium, magnesium, or aluminum (such as Maalox, [Milk of Magnesia](#), Mylanta, [Pepcid Complete](#), [Rolaids](#), Tums, and others);
- didanosine (Videx) powder or chewable tablets;
- vitamin or mineral supplements that contain calcium, iron, magnesium, or [zinc](#).

Tell your doctor about all your other medicines, especially:

- [clozapine](#), [cyclosporine](#), [methotrexate](#), [phenytoin](#), [probenecid](#), [ropinirole](#), [sildenafil](#), or [theophylline](#);
- a blood thinner ([warfarin](#), [Coumadin](#), [Jantoven](#));
- heart medication or a diuretic or "water pill";
- oral diabetes medicine;
- products that contain [caffeine](#);
- medicine to treat [depression](#) or mental illness;
- steroid medicine (such as [prednisone](#)); o
- **NSAIDs (nonsteroidal anti-inflammatory drugs)** - [aspirin](#), [ibuprofen](#) ([Advil](#), [Motrin](#)), [naproxen](#) ([Aleve](#)), [celecoxib](#), [diclofenac](#), [indomethacin](#), [meloxicam](#), and others;

This list is not complete. Other drugs may interact with ciprofloxacin, including prescription and over-the-counter medicines, [vitamins](#), and [herbal products](#). Not all possible drug interactions are listed here.
