Venofer

Venofer Injection 🖏

Generic name: iron sucrose (injection) [EYE-urn-SOO-krose]

Brand name: Venofer

Drug class: Iron products

Medically reviewed by Sanjai Sinha, MD. Last updated on May 7, 2024.

Uses Warnings Before taking Dosage Side effects Interactions

What is Venofer?

Venofer injection contains iron sucrose, a form of the mineral iron. Iron is important for many functions in the body, especially for the transport of oxygen in the blood.

Venofer is used to treat severe iron deficiency anemia due to chemotherapy, advanced kidney diseases, and other causes.

Venofer is not for treating other forms of anemia not caused by iron deficiency.

Venofer is for use in adults and children at least 2 years old.

Warnings

You should not receive Venofer if you have ever had an allergic reaction to an iron injection, or if you have iron overload (the buildup of excess iron) or hemochromatosis.

Iron sucrose can make it harder for your body to absorb iron medications you take by mouth. Tell your doctor if you are taking iron supplements or other iron-based oral medications.

Before you receive Venofer, tell your doctor if you have low blood pressure, or if you have received many blood transfusions in the past.

Before taking this medicine

You should not be treated with this medicine if you have ever had an allergic reaction to an iron injection.

To make sure Venofer injection is safe for you, tell your doctor if you have:

• hemochromatosis or iron overload (the buildup of excess iron).

Tell your doctor if you are pregnant or plan to become pregnant. Iron sucrose can harm an unborn baby if you have a

severe reaction to this medicine during your second or third trimester. However, not treating iron deficiency anemia during pregnancy may cause complications such as premature birth or low birth weight. The benefit of treating your condition during pregnancy may outweigh any risks.

If you are breastfeeding, tell your doctor if you notice diarrhea or constipation in the nursing baby.

Venofer pregnancy and breastfeeding warnings (more detail)

How is Venofer given?

Venofer is given as an infusion into a vein. A healthcare provider will give you this injection.

This medicine is sometimes given slowly, and the infusion can take up to 2.5 hours to complete.

Tell your caregivers if you feel any burning, pain, or swelling around the IV needle when Venofer is injected.

You will be watched closely for at least 30 minutes to make sure you do not have an allergic reaction.

You will need frequent medical tests to help your doctor determine how long to treat you with Venofer.

Detailed Venofer dosage information

What happens if I miss a dose?

Call your doctor for instructions if you miss an appointment for your Venofer injection.

What happens if I overdose?

Seek emergency medical attention or call the Poison Help line at 1-800-222-1222.

What should I avoid while using Venofer?

Avoid getting up too fast from a sitting or lying position, or you may feel dizzy.

Venofer side effects

Get emergency medical help if you have **signs of an allergic reaction to Venofer:** hives, rash, itching; feeling light-headed; difficulty breathing; swelling of your face, lips, tongue, or throat.

What other drugs will affect Venofer?

Treatment with Venofer injections can make it harder for your body to absorb iron medications you take by mouth. Tell your doctor if you are taking iron supplements or other iron-based oral medications, such as:

- · ferrous fumarate;
- ferrous gluconate; or
- · ferrous sulfate, and others.

This list is not complete. Other drugs may interact with iron sucrose, including prescription and over-the-counter medicines, vitamins, and herbal products. Not all possible drug interactions are listed here.
